Education

Vassar College, Poughkeepsie, NY - B.A. Computer Science and History | GPA: 3.6/4.0 September 2022 - May 2026

- Relevant Coursework: Compilers, Computer Networks, Natural Language Processing, Analysis of Algorithms, Theory of Computation
- History Thesis: "From Data to Drones: Technology's Role in Sustaining America's Forever Wars"
- Athletics: Varsity Lacrosse (2022-2026), 3 times Liberty League All-Academic Team

University of California, Berkeley

June 2025 - August 2025

- Affiliate Student - Computer Science Summer Program. Relevant Coursework: Computer Architecture, Computer Security, Software Engineering

University College London, London, England

- Affiliate History Program

September 2024 - December 2024

Experience

Software Engineering Internship - RainMaker Capital

May 2026 - Present

- Built and deployed full-stack investment banking analytics tool, integrated a REST-API with a CRM and automated email workflows to streamline deal-flow tracking and lead generation for analysts
- Worked with senior management to iteratively design, test, and refine the product to meet business needs

Server and Storage Assistant - Indie Wine and Beer Bar and SF Wine Center

July 2024 - May 2026

- Serve food and beverages in a high-paced environment, and manage deliveries, while ensuring timely and accurate receipt of products
- Manage stock by organizing wine storage lockers and maintaining accurate inventory records

Market Analyst Intern - RainMaker Capital

June - August 2024

- Conducted in-depth research and market analysis in the healthcare technology sector
 - Developed comprehensive write-ups and created a report summarizing research findings for stakeholder review
-

Projects

Robot Evaluation Platform | IsaacSim | Franka Panda

- Building a headless IsaacSim evaluation environment in Python for a Franka Panda robot to benchmark vision-language model manipulation tasks
- Integrated natural language tasks with robotic manipulation by translating natural language into robot actions
- Automated evaluation loop including task execution, success/failure logging, and performance metrics

Bit Torrent Client

- Implemented a Bit Torrent Peer in C using POSIX UDP socket programming
- Implemented concurrent peer downloads and sliding-window reliability protocol for high-throughput file transfer
- Downloaded chunks of files concurrently from multiple peers with SHA-1 verification

Compiler

- Created recursive descent parsing and abstract syntax tree construction
- Implemented type checking for expressions, functions, conditions, and control flow
- Generated RISC-V assembly from a custom programming language
- Implemented optimizations like loop-invariant hoisting, constant fold, strength reduction, copy propagation, etc

Secure File Sharing Software

- Built an end-to-end encrypted file sharing software in Go with AES-CTR, HASHKDF, HMAC'S, RSA signatures, UUIDs to ensure integrity, confidentiality and authentication
 - Supported secure file sharing, access revocation, and integrity verification
-

Skills

- Programming languages: Python, Java, C, Golang, Ruby, Typescript, Ocaml, C#, GDscript, HTML/CSS,
- Frameworks/Devtools: Linux, Git, PyTorch, SpaCy, Scikit-Learn, Svelte, Heroku, VS Code, REST APIs, IsaacSim
- Concepts: Socket Programming, Distributed Systems, OOP, Functional Programming, Networking(TCP/UDP), Compilers, Cryptography
- Other: Research skills, Microsoft suite, Spanish (Proficient)
